Unit Outline

Unit summary

Unit Title: Applied Control Engineering
Unit Code: JEE344
Semester: 1 Year 2011
Pre-Requisites: JEE326 Instrumentation and Process Control
Prior knowledge &/or skills: JEE114 Electrical Fundamentals
JEE223 Thermal Engineering
Courses: Bachelor of Engineering (Marine and Offshore Systems)
Credit Points: 12.5
National Centre: Maritime Engineering and Hydrodynamics
Campus: Launceston

Unit description

The unit is to provide students with knowledge of control engineering and help students to develop practical skills of modelling, design, simulation and analysis of control systems commonly used in maritime industries.

Learning outcomes

On successful completion of the unit, students should be able to:

1. Apply block diagram and state space representations and numerical methods in computer simulation of dynamic systems and design of control systems using LabVIEW and MATLAB/Simulink (as required).
2. Design and analyse automatic control systems and/or with hardware and software by applying PID, modern and intelligent control laws in control systems used in marine and offshore industries.
3. Use LabVIEW and MATLAB/Simulink (as required) as a tool for design, simulation, system identification and modelling, operation and analysis of control systems.
4. Use and configure computers, data acquisition devices including I/O interfaces, PLCs and CAN buses for design and operation of control systems.

Graduate attributes

BE Degree Outcomes

A. Demonstrate technical knowledge
B. Design for the maritime environment
C. Solve maritime engineering problems
D. Manage, create, use and disseminate information
E. Communicate effectively
F. Work in teams
G. Manage self and others
H. Negotiate the business environment
I. Behave as a professional
J. Consider wider context of engineering knowledge and work

The relevant BE Degree Attributes are in the BE Course Rules at:

http://www.amc.edu.au/be.course.content.rules

Content

1. Theory
   - Control systems applied within ships, boats and offshore platforms
   - Marine actuators and control elements, including their selection
   - Systems engineering approach to marine control design
   - An introduction to modern control engineering including pole placement, optimal control and intelligent control systems and distributed marine control systems
   - State space design of modern marine control systems
   - Theoretical and experimental modelling approaches: modelling mechanical, electric
and electronic, hydraulic and pneumatic systems commonly used in marine control engineering

- Data bus communication, marine (industrial) bus hardware, marine bus topography, bus redundancy and safety bus
- Digital control systems: digital (computer-based) control systems
- Design, simulation and analysis of computer-based PID control systems for marine and offshore systems
- An introduction to PLCs.

2. Practical and Lab

- **Lab 1**: Configuration and programming of controllers using I/O (NI 6036E) interfacing devices
- **Lab 2**: Configuring and programming PLCs
- **Lab 3**: Networked control systems using data communication buses
- **Computer lab**: Students practice programming with MATLAB/Simulink and/or LabVIEW to design, simulate and analyse marine control systems in computer lab.

Learning resources required

**Requisite texts**
Lecture notes and handouts distributed by lecturer.

**Recommended reading**

E- (electronic) resources

MyLO: Yes

- Lecturer notes and handouts
- Tutorials, laboratories, and assessments
- Past examination papers
- Additional information

See http://www.utas.edu.au/coursesonline/ for further information about accessing MyLO.

Lecturer’s website: http://academic.amc.edu.au/~hnguyen/

Equipment & materials

Materials to be provided by the student
Non-Programmable Scientific Calculator
Experimental work: lab coats or overalls, safety shoes

Materials to be provided by AMC:
Course notes purchased from Uni Print.

Extra costs:
Photocopying costs.

Computer hardware & software
MATLAB/Simulink, LabVIEW and Word processing and spreadsheet software

Occupational health and safety (OH&S)
The University is committed to providing a safe and secure teaching and learning environment. In addition to specific requirements of AMC and this unit you should refer to the University’s policy at: http://www.admin.utas.edu.au/hr/ohs/pol_proc/ohs.pdf

All laboratory work requires students to follow OH&S requirements stipulated for the areas utilised. Students must wear lab coats or overalls and safety shoes for all laboratory sessions.

Other requirements
TBA

Unit outline version 02/04/2011
## Specific attendance/performance requirements

Attendance at all assigned class times is expected. You are responsible for all information (both academic and administrative) presented during class times. Should you miss a class for whatever reason it is your responsibility to obtain information and content that was missed. Attendance at all laboratory and practical sessions is compulsory.

Assessment details

Types and Weighting of Assessment:
To pass the unit student must achieve at least 50% of the total coursework and 50% of the design assignment. Detail of each assessment is given below.

Design Assignment (50%, Part A 20% and Part B 30):

Task Description:
- Design assignment is a project-based design assessment and requires preparation, practice of programming and individual reporting. Design assignment will cover all aspects of the unit. Students are expected to start the design assignment in the beginning of semester 2, submit into two parts (Part A and Part B).

Links to Learning Outcomes: 1, 2, 3, 4

Assessment Criteria:
- Demonstrate and apply theoretical and practical knowledge of control engineering related engineering principles to design, simulation and analysis of control systems used in marine and offshore systems
- Solve problems in the design, simulation and analysis of control systems
- Evaluate the performance of the control systems through relevant calculations, results, experiments and data analysis
- Communicate in writing in the form of a technical report.

Due Dates for Design Assignment: Part A (29.4.11) and Part B (30.5.11)

Practical/Labs (30%):

Task Description:
- The practicals in control engineering lab require preparation, participation, and individual or group reporting. Reports are scheduled in two weeks after the commencement of experiments. The format for the reports will be discussed prior to the submission of the lab report. Practical reports, teamwork and written and graphical communication skills will be emphasised and assessed.

Links to Learning Outcomes: 1, 2, 3, 4

Assessment Criteria:
- Demonstrate and apply theoretical and practical knowledge of control engineering and related engineering principles to explanation of control systems and components in laboratories
- Solve problems in the design, simulation, operation and analysis of control systems with LabVIEW and MATLAB/Simulink as required.
- Evaluate the performance of the control systems through relevant calculations, results and experimental data analysis
- Communicate in writing in the form of a technical lab report.

Due Date for Lab Report (if required) is two weeks after commencing experiments
Class Test (10%): An hour class test will cover theoretical design of control systems applied in maritime industries. Students are responsible for material from lecture, tutorials and text.

Due Date for Class Test: Week 8 (Wed 12/4/2011)

Tutorials (10%): Participation in tutorials is assessable so attendance is mandatory. Problems lay out and written communication skills are very important in engineering problem solving. The tutorials involve in solving control problems, programming and support class tests and design assignments. Attendance, solving problems and programming in tutorials will be assessed continuously. Worked problems and complete programs are submitted at the end of semester.

Due Date for Tutorials: Continuous

Submission of assignments and reports

All assignments, reports, etc. must be completed using the template provided on the web, (http://www.amc.edu.au/beng.templates), unless otherwise specified by the lecturer. The accompanying cover sheet must be completed. All descriptive components of the assignments and reports should be typed. Group reports must be signed by all participants.

Assignments and reports must be placed in the lecturer’s assignment box by the due dates (ground floor in the Swanson Building).

Electronic submissions are not acceptable (unless otherwise instructed by lecturer). The assessed work will be returned during lecture or as agreed between the students and the lecturer.

How your final result is determined

The grade that you receive for this unit will be determined by a committee of examiners. The raw marks that you receive from each piece of assessable material will be combined in order to determine a letter grade for the unit (see Assessment Schedule for percent weighting). The raw marks may undergo a scaling process.

The assignments will be awarded a grade from HD to NN in accordance to a criterion based grading system (see BE Course Rules). This will be based on an assessment matrix (to be handed out at least three weeks before the assignment due date), which identifies the level of performance by indicative characteristics associated with each level against each criterion. The criterion based grading system will provide students with the following grades for each assignment, with the final grade obtained by combining the two grades in line with allocated weighting.
Penalties
Except in cases where medical documentation can prove a student’s illness during the appropriate period or under certain exceptional circumstances, assignments and reports will be deducted 10% of the maximum possible mark for each working day.

Problems with your assessment
If you have questions or problems with your assessment, you should discuss this with the following people:

(1) The person who marked the assessment.
(2) Unit Coordinator.
(3) Head, Maritime Engineering.
(4) Director, National Centre for Maritime Engineering and Hydrodynamics.

If this does not resolve the issue, you may file formal appeal. The procedure is given at: http://www.studentcentre.utas.edu.au/examinations_and_results/results/result_review_results.htm

Course rules
More information with regard to content, assessments, grading, etc. is found in the Course Rules Document at: http://www.amc.edu.au/be.course.content.rules

Academic referencing
In your written work you will need to support your ideas by referring to scholarly literature, works of art and/or inventions. It is important that you understand how to correctly refer to the work of others and maintain academic integrity.

Failure to appropriately acknowledge the ideas of others constitutes academic dishonesty (plagiarism), a matter considered by the University of Tasmania as a serious offence.

For information on presentation of assignments, including referencing styles:

Please read the following statement on plagiarism. Should you require clarification please see your unit coordinator or lecturer.

Academic misconduct
Academic misconduct includes cheating, plagiarism, allowing another student to copy work for an assignment or an examination and any other conduct by which a student:

   a) seeks to gain, for themselves or for any other person, any academic advantage or advancement to which they or that other person are not entitled; or
   b) improperly disadvantages any other student.
Students engaging in any form of academic misconduct may be dealt with under the Ordinance of Student Discipline, and this can include imposition of penalties that range from a deduction/cancellation of marks to exclusion from a unit or the University. Details of penalties that can be imposed are available in the Ordinance of Student Discipline – Part 3 Academic Misconduct, see http://www.utas.edu.au/universitycouncil/legislation/

Plagiarism is a form of cheating. It is taking and using someone else's thoughts, writings or inventions and representing them as your own; for example, using an author's words without putting them in quotation marks and citing the source, using an author's ideas without proper acknowledgment and citation, copying another student's work. If you have any doubts about how to refer to the work of others in your assignments, please consult your lecturer or tutor for relevant referencing guidelines, and the academic integrity resources on the web at: http://www.academicintegrity.utas.edu.au/

The intentional copying of someone else’s work as one’s own is a serious offence punishable by penalties that may range from a fine or deduction/cancellation of marks and, in the most serious of cases, to exclusion from a unit, a course or the University.

The University and any persons authorised by the University may submit your assessable works to a plagiarism checking service, to obtain a report on possible instances of plagiarism. Assessable works may also be included in a reference database. It is a condition of this arrangement that the original author’s permission is required before a work within the database can be viewed.

For further information on this statement and general referencing guidelines, see http://www.utas.edu.au/plagiarism/ or follow the link under ‘Policy, Procedures and Feedback’ on the Current Students homepage.

Further information and assistance

If you are experiencing difficulties with your studies or assignments, have personal or life planning issues, disability or illness which may affect your course of study, you are advised to raise these with your lecturer in the first instance.

There is a range of University-wide support services available to you including Teaching & Learning, Student Services, and International Services. Please refer to the Current Students homepage at: http://www.utas.edu.au/students/

Should you require assistance in accessing the Library visit their website for more information at: http://www.utas.edu.au/library/
